Rebuttal Material for ICML 2025

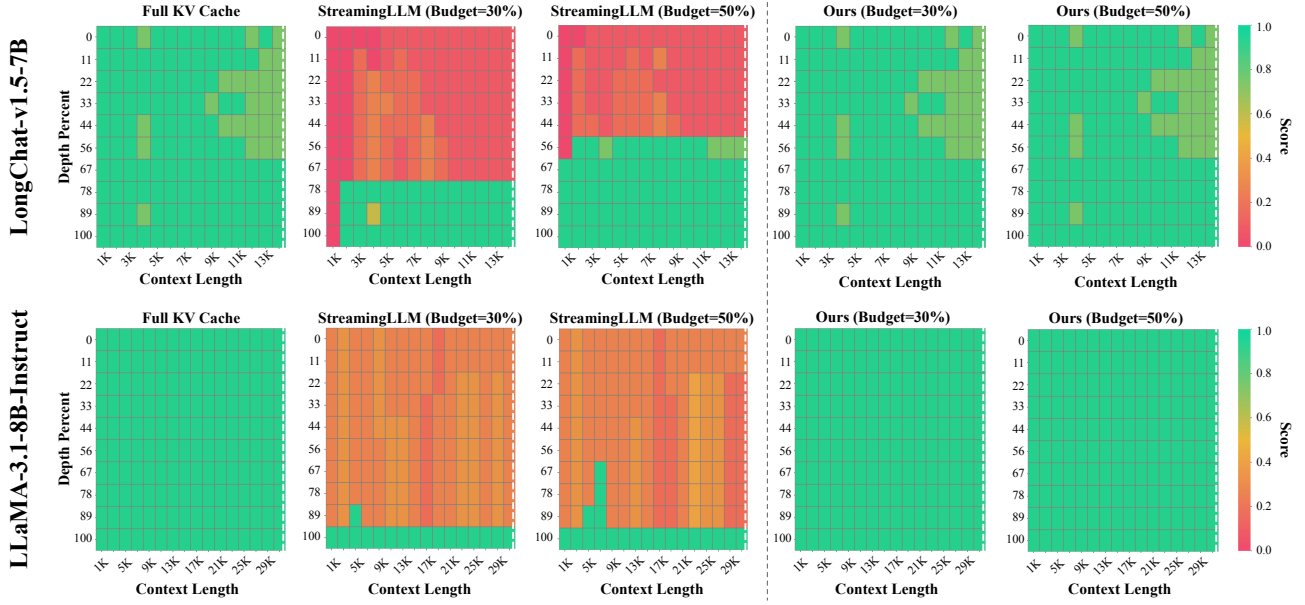

Figure 1. Needle-in-a-Haystack benchmark comparison. The x-axis denotes the length of the context ("haystack") and the y-axis indicates the position where the "needle" (a short prompt) is inserted within the context. We set the context length to 0.5K-16K on LongChat-v1.5-7B and 1K-32K on LLaMA-3.1-8B-Instruct. Our method demonstrates comparable performance with the full KV cache and outstanding performance compared with StreamingLLM.

Table 1. Extend the method of MPCache to LLaMA-3.1-8B-Instruct on LongBench with an average KV cache budget of 2048. We compare with recent SOTA static and dynamic baselines and demonstrate the effectiveness of our method. We use the tasks that are evaluated in recent studies. The best result is highlighted in **bold** and the second best in underline.

Table 2. Extend the method of MPCache to LLaMA-3.1-8B-Instruct on LongBench with an average KV cache budget of 1024. We compare with recent SOTA static and dynamic baselines and demonstrate the effectiveness of our method. We use the tasks that are evaluated in recent studies. The best result is highlighted in **bold** and the second best in underline.
